MUSICAL-PHOTOGRAPHIC ESSAY ABOUT ALASKA
TO BE PRESENTED AT UM FEB.23

MISSOULA

The University of Montana geology department will present a 45-minute tone poem about the beauty of the southeastern Alaskan coastline and the dangers it faces Wednesday ^{night} (Feb. 23).

The program, entitled "Suzann's Lament," will be shown at 7:30, 8:30 and 9:15^{p.m.} in room 131 of the UM Science Complex. It is open to the public without charge.

The tone poem is a musical-photographic essay comprised of more than 300 slides illustrating the mountain, coastal and glacial scenery of southeastern Alaska with a musical background. Included are reactions of a field party to the land and its people and a commentary on environmental abuse in the area.

Featured during the program will be background music by the Beatles, Johnny Cash, Bob Dylan, Paul McCartney, James Taylor, The Band, and Crosby, Stills, Nash and Young.

The program is produced by the Coastal Research Group of the University of Massachusetts geology department under the direction of professor Miles O. Hayes.
